QA ENGINEER · TAKE-HOME ASSIGNMENT

Test the Paradox store and shopping cart

Design test scenarios for the Paradox Interactive online store (formerly Paradox Plaza) and automate the most valuable ones. The scope covers browsing products and using the cart. It does not include buying anything.

Expected effort	4–6 hours
Deadline	5 working days
Language/tool	Your choice

System under test

The store is live production. paradoxplaza.com now redirects here. You do not need an account.

Store home	https://www.paradoxinteractive.com/our-gam

	es/discover
All games	https://www.paradoxinteractive.com/our-games/all-games
On sale	https://www.paradoxinteractive.com/our-games/on-sale
Cart	https://www.paradoxinteractive.com/our-games/cart

In scope

- **Catalog:** product listing, search, sorting, and filters (brand, product type, OS compatibility).
- **Product page:** name, price, discounts, platform info, and the "Add to cart" button.
- **Adding to cart:** adding from listing tiles and from product pages, and the cart icon counter in the header.
- **Cart:** line items, removing items, the empty state, the promo code field, subtotal, discount, total, and "Continue shopping".

Ground rules for testing a live site

- Never complete a purchase or enter payment details. You may check that "Proceed to checkout" is present and enabled, but stop there.
- Don't create accounts or log in.
- Run automated tests one at a time, not in parallel, and don't loop them against the site.
- Catalog content and prices change often. Your tests should still pass next month.

PART 1

Test scenarios

Write 12–20 test cases for the in-scope areas. Use any format, such as a spreadsheet, Markdown, or Gherkin. Each case should include at least:

Field	Example
ID and title	CART-03: Removing the only item shows the empty cart state
Priority	High / Medium / Low, with a one-line reason
Preconditions	One item in cart, guest user
Steps	Numbered and reproducible
Expected result	Specific and checkable. Avoid vague results like "works correctly".

Cover positive, negative, and edge cases. Mark which cases you would automate and explain why. If you find bugs or UX issues while exploring, write them up as short bug reports.

PART 2

Automation

Automate at least 5 of your scenarios. Together, they must cover at least these flows:

1. Find a product with search or a filter, then add it to the cart.
2. Check that the header cart counter updates after adding an item.
3. Check that the cart summary adds up: subtotal minus discount equals total.
4. Remove an item and check that the cart updates or shows the empty state.
5. Check that the cart contents persist after reloading the page.

We recommend Playwright (TypeScript or Python). Selenium, Cypress, or similar tools are also fine.

We expect

- A clear structure, for example page objects or similar, without copy-pasted selectors.
- Robust selectors. Prefer roles, labels, and accessible names over generated CSS class names.
- No fixed sleeps. Wait for conditions instead.
- Tests that don't depend on a specific product name or price.
- Independent tests, each starting with a clean cart.
- Handling for the cookie consent banner if it appears.
- A README with setup and run commands. We will run your tests on a clean machine.

Optional extras

- A CI config, such as GitHub Actions
- An HTML report, or screenshots and traces on failure
- A mobile viewport or a second browser
- Checks against the network calls that drive the cart

What to send us

- A link to a Git repository (public, or shared with us) or a zip that includes the .git folder
- Your test scenarios document
- A short note: your assumptions, what you'd test next with more time, and any bugs you found

How we'll review it

We value good judgement over the number of tests. We'll look at:

- Coverage and prioritisation of the scenarios
- Clear, specific expected results
- Code quality and maintainability
- How reliable the tests are against live, changing data
- How well you explain your reasoning in the README and the note

The follow-up interview will start with a walkthrough of your solution.

Questions

Questions about the task? Contact your recruiter. Asking questions is welcome and won't count against you.

Good luck, and have fun exploring the store.
